EDUCATION

Cyber Security student in The University of East London

Gulf English School | IGCSE | Kuwait 05/2022 Graduated

Cybersecurity and Web Development student at the University of East London with hands-on experience building secure, scalable web applications, AI systems, and UI/UX driven platforms. Skilled in Python, JavaScript, Flutter, Figma, and SAP, with strong expertise in cybersecurity, API security, and full-stack development. Proven track record in delivering real world projects, freelance international work, and award winning innovation focused on performance, security, and user experience.

EXPERIENCE

Website Developer, 2025 – Egypt

I developed and designed websites for local brands in Egypt, helping them establish a strong digital presence and effectively showcase their identity online. These solutions were created to enhance customer experience by improving usability, making it easier for users to browse products, engage with services, and connect with the brand. The work focuses on delivering clean, responsive, and user-friendly interfaces that support both brand visibility and customer engagement.

Mobile App Designs , 2025 – Egypt

UI/UX design work focused on creating intuitive and visually appealing mobile application interfaces using Figma, with strong attention to usability, user flow, and modern design principles. These designs were then implemented as fully functional cross-platform mobile applications using Flutter, ensuring accurate translation from design to development. The work emphasizes clean interface structure, responsive layouts, and seamless user interactions, while maintaining performance, consistency, and scalability across both Android and iOS platforms.

Training - Data Entry, 02/2024 - 04/2024 – Kuwait

Enhanced student engagement by integrating Microsoft tools and technologies into structured lesson plans. Developed and prepared training materials using Microsoft Office Suite, contributing to an efficient onboarding process for new ambassadors. Performed accurate data entry into databases using both alphabetical and numerical organization systems. Compiled, sorted, and validated data to ensure consistency and accuracy. Additionally, organized and maintained files, spreadsheets, and reports to support efficient workflow and data management processes.

Assistant Teacher in Computer Science, 01/2023 - 05/2023 – Egypt

Collaborated with teachers to design structured lesson plans and coordinate classroom activities to ensure effective and engaging learning experiences. Assisted lead teachers in providing individualized student support, contributing to improved academic performance and better learning outcomes. Supported the implementation of new learning tools, systems, and instructional materials to enhance classroom efficiency and teaching effectiveness. Maintained accurate documentation by completing daily reports, meal count sheets, and attendance logs in a timely manner. Worked closely with lead teachers to assess student progress, identify learning gaps, and support targeted improvement strategies.

SAP Dual Study Program Trainee | Nov 2025 – Jan 2026 | Remote, Cairo, Egypt

Successfully completed an intensive SAP Dual Study Program focused on Cloud ERP systems and enterprise digital transformation, with hands-on exposure to SAP S/4HANA Cloud Public Edition in a structured, real-world simulation environment. Gained practical experience in end-to-end ERP business processes, including financial accounting (General Ledger, Accounts Payable/Receivable), procurement-to-pay cycles, supply chain operations, and order-to-cash workflows. Worked with integrated SAP modules to understand cross-functional data flow, business process automation, and system-driven decision-making within enterprise environments.

Developed applied knowledge of cloud-based ERP architecture, data management principles, and enterprise system integration, with a focus on how organizations leverage SAP solutions to optimize operational efficiency and scalability. Enhanced problem-solving and analytical capabilities through business case studies, process mapping exercises, and scenario-based ERP configurations. Collaborated in a professional remote learning setting, adhering to structured SAP methodologies and industry-standard workflows. Strengthened understanding of digital transformation strategies, business process optimization, and enterprise system alignment with organizational goals.

PROJECTS

Freelance Web Development Projects – International Clients

Successfully worked with clients from the United States and Canada through freelance platforms including Upwork, Freelancer, and other online networks to design and develop professional websites tailored to different business needs and industries.

Delivered multiple responsive and modern web solutions for startups, small businesses, and independent professionals, focusing on user experience, performance optimization, professional branding, and clean frontend development.

Worked directly with international clients throughout the full project lifecycle including requirements gathering, UI/UX improvements, revisions, deployment, and post launch support. These experiences helped strengthen both my technical and professional communication skills while adapting to real world expectations and deadlines.

Designed and developed responsive business websites by translating client requirements into professional digital solutions. Improved UI/UX design and enhanced overall user engagement through modern, scalable frontend interfaces. Managed projects efficiently while meeting international client deadlines and maintaining clear, professional communication with clients across different countries. Additionally, deployed and maintained live websites, handled client revisions and feedback, and ensured continuous performance optimization for optimal functionality and user experience.

CyberLearnHub – Cybersecurity Learning Platform

Designed and developed a modern cybersecurity education platform aimed at helping learners progress from beginner level to professional cybersecurity expertise through structured and practical training.

Cyber-Learn-Hub provides specialized Red Team and Blue Team learning paths, progress tracking dashboards, certification systems, and expert led courses covering ethical hacking, SOC analysis, threat hunting, web security, and defensive security operations.

The platform focuses on combining practical experience with professional learning methodologies to create an engaging and career-focused educational ecosystem.

Designed and structured comprehensive cybersecurity learning paths ranging from beginner to advanced levels, including specialized Red Team and Blue Team tracks. Developed interactive, real-world cybersecurity scenarios to enhance practical skills, alongside a robust progress tracking and performance analytics system. Integrated an achievement and certification framework, supported by a large and diverse cybersecurity course library. Focused on delivering a user-centric dashboard with a modern UI/UX design, built on a scalable architecture to support future expansion and continuous platform growth.

Secure Share – Secure File Sharing Platform

Developed a secure file-sharing platform focused on protecting sensitive data through advanced cybersecurity practices. The platform ensures files are only accessible to authorized users using AES-256 encryption, custom password protection, and time-limited access links that automatically expire.

Implemented a role-based access control system for managing permissions, alongside monitoring dashboard that tracks uploads, downloads, and file access events to improve visibility and accountability.

Technologies Used: HTML, CSS, JavaScript

Development Methodology: Delivered across 4 Agile sprints with 100% completion of planned tasks.

The project is fully open-source and available on GitHub, with a live version accessible through my GitHub Pages portfolio.

I built a secure file management system featuring AES-256 encrypted file storage to ensure high-level data protection. I implemented password-protected file sharing along with secure access links and clear explanations of secure access mechanisms. I also developed role-based access control (RBAC) to manage user permissions effectively across different access levels. In addition, I created a real-time activity dashboard for monitoring and tracking system activity, and designed a responsive, user-friendly interface to ensure smooth usability across all devices.

Websites Under Construction Platform

I designed and developed a professional “Websites Under Construction” platform for businesses and startups requiring temporary landing pages prior to full website launch. The platform features visually engaging maintenance and coming-soon pages with fully responsive layouts, integrated contact and subscription forms, countdown timers, and flexible branding customization options to maintain a strong and professional online presence during development phases. This project enhanced my expertise in frontend development, responsive design, and user experience optimization, with a strong emphasis on clean, modern, and business-oriented web presentation.

Additionally, I developed modern, responsive UI/UX interfaces with a focus on usability and visual impact. I implemented countdown and launch timers to generate engagement and anticipation for upcoming projects, along

with contact and subscription forms to improve client interaction and lead generation. I built customizable branding and theme systems to support different business identities and ensure design consistency across all pages. Furthermore, I created SEO-optimized landing pages with mobile-first layouts for improved visibility and performance across devices. For construction-focused websites, I integrated project showcase sections, before-and-after galleries, service listings, client testimonials, and structured project timelines to effectively highlight engineering work and complete developments in a clear and professional manner.

Rotaract Golf Madinaty Website :

Designed and developed the official website for the Rotaract Golf Madinaty community to strengthen its online presence and improve member engagement. The platform was created to help students and young professionals learn more about Rotaract, explore ongoing initiatives, and apply to join the organization through an easy and modern digital experience.

The website highlights the club's mission, social impact activities, leadership opportunities, community service events, and volunteering programs while providing a clean and responsive user interface.

I designed and developed a modern, responsive website focused on community engagement and organizational presentation. I implemented a "Join Us" membership application section to streamline onboarding and improve user participation, along with dedicated event and activity showcases to highlight ongoing and upcoming initiatives. I also created structured sections for club leadership and team presentation, as well as community service and volunteering information to clearly communicate the organization's mission and impact. The platform was built with a mobile-friendly, optimized user experience in mind, supported by professional branding and consistent UI/UX implementation to ensure a clean, engaging, and accessible digital presence.

REST API Abuse Detection Using Request Pattern Analysis :

Developed an intelligent API security monitoring system focused on detecting suspicious and abusive API behavior through request pattern analysis and machine learning techniques.

The system analyzes API traffic patterns in real time to identify abnormal activities such as request flooding, brute-force attempts, automated abuse, and unusual user behavior that may indicate potential cyberattacks.

Built using Streamlit, the platform provides a clean and interactive dashboard for monitoring API requests, viewing analytics, and detecting threats efficiently. The project focuses on improving API security visibility and helping organizations respond proactively to malicious activities.

I developed a real-time API traffic monitoring and security analytics system focused on detecting and preventing abusive or suspicious API behavior. The system leverages machine learning-based anomaly detection to identify unusual request patterns and enhance security insights. I implemented request pattern behavior analysis to better understand traffic flows and detect potential threats. In addition, I built features for detecting suspicious and abusive API activities, supported by an interactive Streamlit dashboard for real-time visualization and analytics. The platform emphasizes security-focused data visualization, providing clear insights into system behavior, and is designed with a lightweight, scalable architecture for efficient performance and future expansion.

Technologies used include Python, Streamlit, machine learning algorithms, and data analysis & visualization techniques.

Construction Team Management Website :

Designed and developed a professional web platform for a construction and engineering company to strengthen its digital presence and improve communication with clients and project stakeholders. The website was built to showcase the company's services, completed projects, engineering capabilities, and ongoing construction work through a modern, responsive, and user-friendly interface. The platform helped potential clients easily explore the company portfolio, request services, and connect with the team while reflecting the professionalism and credibility of the business.

Additionally, developed a centralized management dashboard enabled construction teams and administrators to monitor workflow progress, employee activities, project timelines, and operational performance in real time. The system improved organization, productivity, and communication between management and team members by providing better visibility into daily operations, task management, and project execution through a secure and interactive digital environment.

Focused on delivering an optimized user experience by implementing responsive design principles, structured content organization, and efficient system navigation across multiple devices and screen sizes. Contributed to improving workflow efficiency and decision-making processes by creating scalable digital solutions tailored to the operational needs of the construction and engineering industry.

Technologies Used:

- HTML
- CSS
- JavaScript
- Dashboard & Data Visualization Concepts

International Women's Day Hackathon 2022 – AI Accessibility Solution :

Participated in the International Women's Day Hackathon 2022, organized by Teens in AI and hosted at Al-Bayan Bilingual School in Kuwait. Worked as part of a selected multidisciplinary team to design and develop an AI-powered web-based assistant aimed at improving accessibility and helping individuals with disabilities navigate daily life more efficiently.

I developed an AI-powered web-based prototype that combined artificial intelligence, web development, and social impact innovation to address real-world challenges through inclusive technology solutions. The project included the development and validation of a business model, along with a professional pitch presentation delivered to a panel of expert judges. I also collaborated effectively within a fast-paced innovation environment, contributing to both technical and strategic aspects of the project. The initiative was awarded 2nd Place Winner, reflecting its impact and execution quality. This experience significantly strengthened my skills in problem-solving, teamwork, AI application development, business strategy, and public speaking, while deepening my passion for building meaningful and impactful technology driven solutions.

Penetration Testing Workshop – Cybersecurity Training Experience :

I participated in a Penetration Testing Workshop hosted by Safeco Tech Network Solutions in Cairo, Egypt, which provided hands-on exposure to modern cybersecurity practices, ethical hacking methodologies, and vulnerability assessment techniques used in real-world security environments. The workshop delivered an interactive learning experience focused on how security professionals identify, analyze, and mitigate system vulnerabilities using industry-standard tools and frameworks. This experience strengthened my understanding of offensive security concepts and enhanced my practical cybersecurity skills, while also providing valuable insight into real-world security operations and professional industry practices.

SKILLS

- Microsoft Office
- Web development (front-end & back-end)
- Data Analysis
- Responsive web design
- UI/UX design principles
- Database basics (SQL)
- API integration
- GitHub
- Figma
- JavaScript
- Shopify
- Python
- Project management
- Time management
- Multitasking
- Computer skills
- Leadership skills

CERTIFICATIONS

- SAP Certified Application Associate - SAP HANA SPS12 Modeling
- Deloitte Data Analytics
- EY - EY Technology Risk
- Deloitte Australia Cyber Job Simulation
- Cisco / **IOT and Digital Transformation**
- Cisco C++ Essentials 1 offered by Networking Academy
- Creating Website AI Assistant Project , Teensinai Hackathon, 03/01/22 Education Administration Programs located in London, England Teeninai
- Certificate of Achievement in Computer Networks Ma3aarf, 09/01/21
- GenAI Powered Data Analytics Course by TATA
- Software Development Course by DATACOM

- Data Science Course by BCGX
